Meeting information			
Meeting no	**Location**	**Meeting Date**	**Attendees**
2	ITB	2017-10-18	All

Update on what happened since last meeting?
- created empty database using MariaDB
- started working on encryption using Fernet (Python)
  - can encrypt password using key
- started GUI using tkinter (Python)
  - first screen layout

Issues discussed this meeting:
- need to figure out how to save key & encrypt password in database then use to decrypt
- MariaDB may be switched to sqlite

What to do next meeting:
- Add working widgets to GUI, start next screen
- Add tables and functions to database
- Separate encryption functions to use for encrypting and decrypting
  - eventually with values from database

Decisions made:
- use peewee for database
- work on aesthetics after GUI functional
- work on separate parts of project, and test then attach to GUI
  - i.e. first test plan is for individual components not integrated
